

BUSINESS STRATEGIES FOR ELECTRONIC COMMERCE

WEEKS 6–7 INDIVIDUAL TASKS

Mabalacat City College • Institute of Computing Studies • IT41ENTREP

INSTRUCTIONS

Read the **Weeks 6–7 Study Sheet** first. Then answer the following tasks **on your own**, using your own words and real technology examples. Type your answers directly in the spaces provided.

Important: Do **not** use the platforms already explained in the study sheet (**Spotify, Netflix, Canva, Microsoft 365**). Choose a different platform or app to show that you can apply the concepts, not just repeat them.

Name	Section	Date Submitted

TASK 1: MY MINI E-COMMERCE BLUEPRINT

Choose **ONE** of the following options, then apply all seven topics to analyze or design its e-commerce strategy:

- **Option A: Real tech platform or app.** Analyze an existing technology business, such as a streaming service, SaaS tool, mobile game, e-wallet, online learning platform, or ride-hailing/delivery app.
- **Option B: My own tech startup idea.** Design an app, website, or online service that solves a real problem, for example for MCC students or small businesses in Pampanga.

Option Chosen (A or B)	Platform / Startup Name	What It Offers (in one sentence)
Option A - Real tech platform or app	Duolingo	Duolingo offers short, interactive language lessons through its website and mobile app.

Part	Your Answer
1. Revenue model: Which model(s) does it use (direct sales, subscription, advertising, affiliate, transaction fee)? Is it freemium or SaaS? Who pays, for what, and when?	Duolingo uses subscriptions and advertising. Learners pay recurring fees for Super Duolingo or Duolingo Max to receive extra features, while advertisers pay to reach free users. It is freemium because the basic courses are free and upgrades are optional. Its paid plans provide ongoing access to an online software service rather than ownership of the software. [1]
2. Web presence: Where can users find it online (website, app stores, social media)? Rate it as findable, consistent, accurate, and maintained, and suggest one improvement.	Users can find Duolingo on duolingo.com, Google Play, the Apple App Store, and social media such as TikTok. My ratings are: Findable - strong, with a searchable name and direct app links; Consistent - strong, with the green owl and recognizable branding; Accurate - good, with official explanations of free and paid access; Maintained - good, with product news and learning content. One suggested improvement is a clearer country-specific comparison showing available plans, total charges, and renewal terms together. [1, 2]

Part	Your Answer
3. Usability: Describe one usability problem users might face when signing up, navigating, or paying, and a best-practice fix. Write one realistic usability test task.	Possible problem: a new user comparing free access and paid plans may struggle to identify the full renewal charge before subscribing. Suggested fix: show a simple comparison with the total charge, billing period, and cancellation instructions before confirmation. Test task: "On your phone, find a paid plan, explain how much and when you would be charged, and locate how to cancel without completing a payment." Observe hesitation, mistakes, and completion time, then improve the page and retest.
4. Web marketing: Name one strategy with a specific example. What result would you measure (sign-ups, downloads, paid subscriptions, churn), and for how long?	Content marketing: Duolingo publishes learning advice, such as its article on studying English independently. It answers a learner need and encourages readers to use the app. I would add a trackable sign-up link to this type of article and measure the number of completed new account registrations from it over 30 days, rather than counting views alone. [3]
5. Target segment: Identify one segment type, describe the users, and write a message or plan offer for them.	Segment type: demographic. Target users: college students with limited budgets who want to practice a language between classes. Proposed message: "Make your study break count. Practice a new language with short, free Duolingo lessons." This highlights affordability and convenience without inventing a student discount.
6. Advertising: Choose one ad technique (search, display, social/creator, in-app/app store, retargeting) and explain why it fits.	Proposed technique: social/creator advertising. Sponsor a clearly labeled TikTok video where a student creator demonstrates a short beginner lesson and links to the app. This suits students browsing short videos, shows the actual learning experience, and makes the next step clear. Target relevant viewers and measure registrations, not just likes.
7. Social networking: Which platform or community should it use (e.g., Facebook, Discord, Reddit, TikTok, LinkedIn), and what benefit will it get?	I would recommend a moderated Facebook group for Filipino Duolingo learners. Members could share study routines, ask beginner questions, and celebrate weekly progress. Duolingo could collect feedback and answer common concerns. Peer encouragement could help learners keep practicing and recommend the app to friends, supporting retention and word of mouth.

TASK 2: REFLECTION QUESTIONS

Question 1: Revenue vs. Profit. Using an app or subscription service (other than those in the study sheet), explain the difference between revenue and profit. Give a simple peso example and list at least two costs the business must pay.

Revenue is the money Duolingo receives before expenses; profit is the amount left after paying its costs. For a simplified hypothetical example, suppose 100 subscribers each pay PHP 200 for one month. Subscription revenue would be $100 \times \text{PHP } 200 = \text{PHP } 20,000$. If server costs are PHP 4,000, developer and lesson-production costs are PHP 8,000, and payment fees and marketing cost PHP 3,000, total costs are PHP 15,000. Profit would be $\text{PHP } 20,000 - \text{PHP } 15,000 = \text{PHP } 5,000$. These are illustration amounts, not Duolingo prices or reported financial results.

Question 2: Friction Kills Sales. Describe a time you gave up on signing up, subscribing, or buying through an app or website because it was hard to use. What usability fix would have kept you as a user?

Sample reflection to personalize: I would abandon an online purchase if a required sign-up form erased my details whenever a verification code expired. Re-entering the same information would make a simple purchase frustrating. Keeping the information already entered, showing a clear resend-code option and countdown, and allowing guest checkout where appropriate would make me more likely to continue. The business should reduce repeated work while keeping necessary security checks.

Question 3: The Muddiest Point. Which topic from Weeks 6–7 is still the most confusing for you, and what specific question do you want answered in our next session?

Sample reflection to personalize: The topic I would like clarified is measuring web marketing results. A customer may see a TikTok ad, read a blog post, and subscribe several days later, so deciding which activity produced the sale seems difficult. My question for the next session is: "How can a small app business measure which marketing channel led to a paid subscription when the customer used several channels before paying?"

SUBMISSION GUIDELINES

- Save this file as **Surname_FirstName_Week6-7_Tasks.docx** (or export as PDF).
- Submit through: [MS Teams Assignments](#)
- Deadline: [September 24, 2026](#)
- Answers must be your own work. Copied answers, answers using the study sheet platforms, or AI-generated answers without specific examples will not receive full credit.
